JERRELL M. ROBERSON, SR.

Upper Marlboro, MD | jerrellroberson@gmail.com | 301-375-0270

CYBERSECURITY ENGINEER • COMPUTER SCIENCE & AI GRADUATE STUDENT

PROFESSIONAL SUMMARY

Cybersecurity engineering professional with 20+ years of experience across federal security programs, penetration testing, vulnerability management, and risk assessment. Graduate student developing deeper capabilities in computer science, systems programming, software engineering, and artificial intelligence. Combines hands-on security analysis with technical leadership, automation, and communication to engineering and executive audiences.

EDUCATION

Boston University | M.S., Computer Science & Artificial Intelligence | Expected Fall 2027

Delta State University | B.B.A., Management Information Systems

DataCamp | Associate AI Engineer for Developers learning track (in progress)

TECHNICAL SKILLS

Programming & tools: Python, C/C++, Java, SQL, PowerShell, Bash, Ruby; Git/GitHub; scripting and automation

Systems & infrastructure: Linux, Windows, Active Directory, TCP/IP, socket programming, Docker, AWS, Azure

Security assessment: Network/web/API penetration testing, vulnerability analysis, secure code review, Nmap, Burp Suite, Tenable/Nessus, AppScan, Splunk

Standards & methods: NIST RMF, SP 800-53/800-171, FISMA, FedRAMP, DISA STIG, OWASP Top 10, MITRE ATT&CK

PROFESSIONAL EXPERIENCE

Efiia Creations, LLC — Senior Information System Security Engineer | Jun 2025 – Jul 2026

- Supported federal security engineering, security control assessment, vulnerability management, and continuous monitoring across enterprise, cloud, and hybrid environments.
- Led technical assessment activities supporting 50+ federal systems; evaluated network, application, API, and cloud controls and documented security risks against NIST requirements.
- Prepared and reviewed authorization evidence and assessment findings; partnered with system owners and ISSOs to prioritize risks and validate corrective actions.
- Built Python, PowerShell, and Bash automation for assessment workflows and evaluated security implications of third-party applications with AI capabilities.

Efiia Creations, LLC — Cybersecurity Engineering / Lead Penetration Tester | Aug 2016 – Jun 2025

- Led network, web application, API, and cloud penetration testing, adversary emulation, vulnerability validation, and technical reporting for federal environments.
- Applied OWASP, MITRE ATT&CK, and NIST-aligned methods to identify weaknesses in systems, applications, identity services, and infrastructure.
- Collaborated with developers, system owners, and security officers to explain exploitability, business impact, and remediation priorities.
- Developed testing scripts and repeatable assessment processes; presented results to both technical teams and executive stakeholders.

ADDITIONAL PROFESSIONAL EXPERIENCE

Axxum Technologies — Web Penetration Tester | 2016

- Conducted web application security assessments and documented findings to support risk-based remediation decisions.
- Used manual testing and assessment tools to evaluate application security weaknesses.

Ingersoll Consulting — Senior Penetration Tester | 2015–2016

- Performed technical penetration testing and vulnerability assessment activities across enterprise environments.
- Communicated validated findings and recommended risk-reduction actions through assessment reports.

Mainstay Enterprises — Senior Penetration Tester | 2014–2015

- Conducted infrastructure and application security testing and supported technical assessment reporting.

Earlier experience: Senior Application Security Consultant (URS); Senior IT Security Engineer (Apptis); additional cybersecurity and technical leadership roles (2005–2014).

SELECTED TECHNICAL & ACADEMIC WORK

Network and systems programming: Graduate coursework and practical exercises in C and Java, including network communication, socket programming, client-server applications, and operating system concepts.

Security automation: Developed Python, PowerShell, and Bash scripts to support vulnerability analysis, security validation, reporting, and repeatable assessment workflows.

AI and application security: Studying LLM security, prompt injection, data exposure, model evasion, and security assessment approaches for AI-enabled applications.

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

CISSP | CISM | CISA | PMP

CISA High Value Asset Assessment Team Lead training; SANS training in Web Application Penetration Testing and External/Internal Penetration Testing.

PORTFOLIO FOCUS

GitHub portfolio documents continuing growth in programming, computer science, software engineering, and AI. Completed academic and independent projects are intended to complement this resume with implementation details and technical documentation.
